Facts:

- bowden wire release system
- less effort (comfortable release of gas springs up to 600N)
- quick click assembly
- variable installation height
- only for short release

The new bowden wire release system for actuating lockable gas springs fascinates with the easytouch design-button. Back rests, beds, tables or any application can be adjusted comfortably at the push of a button.

Even gas springs up to 600N can be released easily with little effort. The variable 'click assembly' with adjustable height, guarantees

- releasing two gas springs by using the 'Splitter'
- Activating one gas spring from two different points using the 'Switch'

simple mounting almost anywhere. The push button is quickly and easily secured and mounted without the use of any screws.

Furthermore there are the variants of releasing two lockable gas springs simultaneously by using the 'Splitter' 20SP1. One gas spring can also be activated from two different points using the 'Switch' 20SW1.

The flyer is subject to technical alterations and printing mistakes. Technische Änderungen und Druckfehler vorbehalten.
